PROFESSIONAL SUMMARY

Software developer and data scientist with a BSc in Applied Statistics, currently building AI-powered accounting agents at CareBearBooks that run end-to-end accounting workflows with minimal human input, from task and payment management to intelligent email and scheduling automation. Proficient in Python, R, SQL, and modern full-stack technologies, with a track record of shipping real products across mobile business apps and scalable web platforms. Uses AI tooling and modern development workflows to accelerate delivery and write cleaner code. Represented Kisii University in national data science competitions. Focused on building intelligent systems at the intersection of data, automation, and great software.

EXPERIENCE

Software Developer

08/2025 – Present

CareBearBooks Accounting · boxbok.com

- Built the **NSBC web application** in TypeScript, a multi-tenant portal where accountants manage tasks, schedules, emails, and payments across clients and coordinate their teams through AI agents for email handling, task allocation, and fulfilment.
- Added a client-facing layer that surfaces invoices and task progress in real time and lets clients book appointments and receive automated feedback without direct accountant contact.
- Developed a business companion mobile app that lets clients manage and monitor their business from their phone, with live integrations to POS systems, QuickBooks, and Stripe.

Data Scientist & Web Developer

2023 – Present

Freelance

- Designed custom data dashboards and business-intelligence tools for clients.
- Delivered actionable insights using Python, Excel, and SQL.
- Mentored students on data projects, predictive models, and survey tooling.

Data Analyst Intern

05/2024 – 08/2024

NSSF, Murang'a Branch

- Reconciled employer contribution records, analysed discrepancies, and produced monthly financial reports.
- Automated Excel workflows for penalty calculations and employer tracking.
- Drafted inspection and compliance letters to defaulting firms.

PROJECTS

Gleam: On-Demand Cleaning Marketplace

2026 – Present

Personal Project · KhimTech

Tech: Next.js, TypeScript, Supabase (PostgreSQL + PostGIS), Tailwind CSS, shadcn/ui, Docker

- Two-sided marketplace connecting Kenyan clients with cleaning providers for homes, offices, Airbnb turnovers, and move-in/move-out jobs.
- Designed a normalised database schema across multiple migrations with row-level security (RLS) policies enforcing multi-tenant data isolation.
- Modelled a business/worker structure to support multi-staff dispatch, with asymmetric onboarding flows for clients and providers.
- Integrated Pesapal for payments and PostGIS for location-aware provider matching; built a themeable UI using CSS-variable presets.
- Containerised the development environment with Docker for parity across local and production builds.

Enterprise AI Trading Platform

- Python trading-system prototype with real-time ML predictions, risk management, and automated portfolio optimisation.

AI Data Analyst

- Python tool that lets users explore and query datasets in natural language, returning summaries and visual insights.

Auto Blog System

- Automated content pipeline built in Python that generates and publishes blog posts on a schedule.

Predictive Modeling for Student Dropout Rates

- Built logistic regression and decision-tree models to identify dropout risk factors across several Kenyan institutions, improving intervention targeting by over 30%.

Web-Based Data Visualization Dashboard

- Built a Flask dashboard visualising education-sector KPIs from public datasets with Plotly and Dash.

EDUCATION

BSc, Applied Statistics

2021 – 2025

Kisii University

- Core coursework: Regression, Statistical Computing, Machine Learning, Time Series, Data Mining.

TECHNICAL SKILLS

Languages: Python, R, SQL, TypeScript, JavaScript, HTML, CSS

Frameworks & Libraries: Next.js, React, Flask, Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Seaborn

Data & AI: Machine Learning, Statistical Modeling, ETL Pipelines, Predictive Analytics, LangGraph, LangChain, n8n

Databases & Infra: PostgreSQL, PostGIS, MySQL, MongoDB, Supabase, Docker, Git/GitHub

BI & Visualization: Power BI, Tableau, Excel, Jupyter, Plotly

CERTIFICATIONS

- Data Science & Analytics (Coursera, Udemy)
- AWS & Azure Fundamentals for Data Analysts
- Microsoft Excel for Data Analysis

NOTABLE ACHIEVEMENTS

- 2nd Place, National Data Science Challenge, JKUAT (Mar 2024)
- Participant, Mozilla Open Hack, Nairobi (Feb 2024)
- Finalist, Inter-University Machine Learning Challenge (Dec 2023)
- Represented Kisii University at the Data Scientists Congress, Mombasa (Oct 2023)
